PROFILE

Full-stack web developer, freelancing since 2023, who designs and ships responsive websites and web apps end to end. Comfortable across the stack — from React, Vue.js and TypeScript front ends to PHP (Laravel), Django and Spring Boot back ends — with hands-on ML and Big Data project experience (scikit-learn, PySpark, Hadoop). Holds an MSc in Data Science & Intelligent Systems (SDSI). Advanced English and French, native Arabic.

TECHNICAL SKILLS

Front-end	HTML5, CSS3, JavaScript, TypeScript, React, Vue.js, Tailwind CSS
Back-end	PHP (Laravel), Python (Django), Spring Boot
ML / Data	Python, Pandas, scikit-learn, Spark (PySpark), Hadoop
Databases	MySQL
DevOps / Tools	Docker, Git & GitHub, Linux, UML modelling

SELECTED PROJECTS & EXPERIENCE

SIARA: Road-Safety Intelligence Platform · Full-Stack & ML Developer 2025

React, React Native (Expo), Node.js/Express, PostgreSQL + PostGIS, Python/Flask, scikit-learn, LightGBM, SHAP, Socket.IO, Docker

- Co-designed and built a production, multi-role platform that predicts road-accident risk and streams real-time hazard alerts across Algeria — spanning a React web app, a React Native mobile app, a Node.js API and a Python ML microservice.
- Trained and deployed three ML model families: a RandomForest driver-risk model with SHAP explanations, a LightGBM danger-zone severity model and an anomaly/spam validator for crowdsourced incident reports.
- Integrated an LLM that turns model output into plain-language risk explanations; implemented JWT role-based auth, PostGIS geospatial queries, real-time notifications and mobile push.

Amazon Reviews Sentiment Analysis · Machine Learning / Big Data & NoSQL Mar–May 2025

Python, PySpark, Hadoop, Docker

- Developed a model able to analyse and classify the sentiment expressed in Amazon customer reviews.
- Pre-processed and handled large-scale review data using Big Data technologies such as PySpark and Hadoop.
- Containerised the whole system with Docker to guarantee portability and simplify deployment.

Delivery Management Web & Mobile Application · Final-Year Project (BSc) 2024

- Designed and developed a web and mobile application dedicated to managing order deliveries.
- Implemented order management and tracking, from placement through to delivery to the customer.

Freelance Full-Stack Web Developer · Web & Mobile Apps 2023–Present

React, React Native (Expo), TypeScript, JavaScript, Tailwind CSS, Vite

- Designed and shipped responsive web and mobile apps end to end. Selected projects (github.com/mi2odev):
- One Piece Personality Test** — anime-themed personality-quiz website.
- JoJo Personality Test** — interactive anime personality quiz.
- Hotel Booking App** — multilingual (EN / FR / AR) hotel booking platform.
- Subscription Watch** — mobile subscription & free-trial tracker.
- School System** — school management web application.
- Salary Sort** — salary sorting and management app.

EDUCATION

MSc: Data Science & Intelligent Systems (SDSI)
University of Constantine 2 (Abdelhamid Mehri) · 2024–2026
Machine Learning, Deep Learning, Big Data & NoSQL, Cloud Computing & IoT, Optimisation Techniques, Data Pre-processing

BSc: Computer Science
University Larbi Ben M'Hidi (Oum El Bouaghi) · 2021–2024
Data Structures & Algorithms, OOP, Web Application Development, Operating Systems, Computer Architecture, Software Engineering, Networks, Advanced Databases

Baccalauréat Scientifique — Mention Assez Bien · 2020–2021
